

## Maintenance Connection Integration Service

The TSC - Maintenance Connection Integration components will automate the transfer of financial information between the two systems.

### Integration Features:

- Creation of Sub-Ledger accounts within TSC's BAS system, derived from work order numbers created in Maintenance Connection.
- Creation of journal entries in TSC's BAS system, derived from work order balances in Maintenance Connection.
- Update of balances in Maintenance Connection, derived from journal entry transactions entered in TSC's BAS system.

### Technical Requirements:

- FTP access to Maintenance Connection server, with ability to read, create and delete files.
- Administrative email address for sending status report and error notifications.

### Annual Service Fee covers:

- Support assistance with technology or data issues.
- Program modifications triggered by changes in 3rd Party Work Order Software data model.
- Maintenance required by new operating systems.
- User documentation.
- Note: This integration will continue to be supported for customers moving to BAS2000.
